**DISCOVER SUPERSET NT,
DESIGNED FOR YOU.**

Supers

QUALITY

Increased productivity
The SET-UP system allows the operator to change tools and perform adjustments in just a few seconds, making set-up time up to twenty times faster.

EFFICIENCY

Maximum flexibility
The machine is able to process work-pieces with variable dimensions, 15x6 mm minimum finished section and 260x200 mm maximum finished section.

VERSATILITY

Customised compositions
Ten possible configurations thanks to two right vertical spindles, two top horizontal spindles, with and without universal spindle.

STRENGTH

Finish quality
Tool-holder spindles with hardened steel cylinders with larger dimensions (120 mm) and double pair of bearings, to ensure rigidity and accuracy.

RELIABILITY

Ergonomic
The machine structure has been specific designed to enable the operator to work in ergonomic and safe conditions.

INNOVATION

Ease of use
The MOBILE PC electronic control makes machine programming intuitive. Clear and precise information are always available, thanks to detailed reports.

TECHNICAL FEATURES OVERVIEW

TECHNOLOGICAL ADVANTAGES

superset nt
automatic throughfeed moulder

Feed system
Maximum flexibility.

Ten possible configurations
Customised compositions

MOBILE PC electronic control
Ease of use.

SET-UP system
Increased productivity.

Machine structure
Ergonomic.

Worktable
Finish quality.

STRUCTURE

Machine bed and top beam are monobloc constructions in thick steel, guaranteeing total lack of vibrations to achieve a high quality finished product.
Each composition has its specific structure.

CUSTOMISED COMPOSITIONS

Ten possible configurations thanks to two right vertical spindles, two top horizontal spindles, with and without universal spindle.

The machine structure has been designed to enable the operator to work in ergonomic and safe conditions.
Maximum reliability during tool change operations, special supports allow to hang the dust collection covers directly on the machine.

The eye-M console is integrated in the machine base and it can be orientated for the best operator's comfort during the programming.

WORKTABLE

Excellent finish with the air blower. The device is made of four rows of holes which create an air cushion on the worktable; each row of holes is activated according to the work-piece width. Together with the worktable lubrication (also automatic), they enable the perfect sliding of the work-piece.

The infeed worktable of tubular steel is equipped with a hardened insert placed before the planer spindle, that ensures maximum stability during the processing of work-pieces, including those with large dimensions.

GROOVED WORKTABLE

It is specific for short, warped or poorly finished work-pieces, fitted with an integrated fence system.

REXILON WORKTABLE

Located above the bottom horizontal spindle, it allows profiling depth up to 50 mm, guaranteeing the worktable continuity.

For 32 and 32U compositions, it is possible to supply two feeding rollers in the worktable, before and after the 1st top horizontal spindle, to enhance the constant towing of the work-pieces.

FEED SYSTEM

superset nt
automatic throughfeed moulder

SINGLE WORK-PIECE MACHINING

In standard configuration, the machine can process a work-piece of 620 mm length; with specific options it is possible to reduce the work-piece length to 450 or 370 mm.

TANDEM UNIT

It reduces the axial distances between the wheels and improve the work-piece pressure system in the machining area.

RUBBER COATED ROLLERS

After the processing of the top horizontal spindle, only rubber coated rollers are provided, in order to avoid damaging the work-piece surface.

TELESCOPIC WHEELS

Placed in front of the left vertical spindle with electronic adjustment and 75 mm stroke, for optimal towing of any work-piece width.

RIGHT AND LEFT FENCES

RIGHT FENCE WITH ADJUSTABLE SECTOR

Rapid set-up: by using a pneumatic selector, the operator can quickly adjust the fence to the correct position, according to the tool dimensions.

LEFT FENCE

Fewer adjustments to be performed due to the possibility of having a single fence (optional for 31 and 31U compositions) at the end of the machine, with pneumatic locking, for uniform pressure over the entire work-piece.

ELECTRONIC LEFT FENCE FOR 32 AND 32U COMPOSITIONS

Fence position for machining a work-piece of maximum width.

Fence position for machining a work-piece of intermediate width.

Fence position for machining a work-piece of minimum width.

RIGHT FENCE WITH ON/OFF

Pneumatic horizontal positioning by means of switch of the 1st right vertical spindle and the fence between the right vertical spindles, in order to execute partial or complete profiles on the 2nd right spindle.

Unrivalled performance: machining units for heavy stock removal, up to 50 mm, and axial strokes of 80 mm on vertical spindles and 45 mm on horizontal spindles, guaranteeing flexibility and variety of achievable products.

SPINDLES WITH “HSK” TOOL CHUCK

The technology with rapid locking allows downtime reduction and finish quality enhancement, with improved ergonomics for the operator.

MACHINING CAPACITY

Minimum finished section: 25x6 mm
Maximum finished section: 240x120 mm

Specific options enable to modify the machining sections from 15x6 mm for minimum finished section up to 260x200 mm for maximum finished section.

“T-SET” DEVICE

The locking of tool much simpler and faster, with only the use of a compressed air gun, supplied with the machine.

“SET-UP” SYSTEM

Increased productivity due to the ability to change tools and perform adjustments in just a few seconds, making set-up time up to twenty times faster.

PRESSER SHOES

Front and rear presser shoes with angular movement are fitted on the top horizontal units to allow the correct work-piece pressure, avoiding undesirable jamming or chattering. The front presser shoe is also provided with pneumatic adjustment.

TWO SECTOR-PRESSER SHOES

Presser shoe made in two parts with height and width adjustments, for a constant pressure on the work-pieces with varying thicknesses.

MULTI-SECTOR PRESSER SHOE

Foreseen for the top horizontal spindle, it ensures high finish quality.

MACHINING UNIT

UNIVERSAL SPINDLE WITH ELECTRONIC ADJUSTMENT OF THE AXES

It is available in models equipped with MOBILE PC, for a complete control of the process, even more simple and quick for the operator.

“TTL” ADJUSTMENT DEVICE

It enables to process sequences of work-pieces with different widths, without stopping the machine to reset different measurements, saving a large amount of time. The device includes touch probe placed at the infeed, and a special fence out-feed at the left vertical spindle, which provides the correct pressure on the work-piece.

“PRL” ARRANGEMENT

Machining unit in place of the universal spindle for the automatic switching (on/off) from planing to the profiling-glazing bead recovering function.

It is also available with electronic axes, for total flexibility.

For compositions with two top horizontal spindles, a 2nd right vertical spindle is available, with or without the universal spindle option.

CORNER CHAMFERING UNIT

Supplementary machining unit placed after last top horizontal spindle, for the corner chamfering of work-pieces with variable dimensions, without the necessity of tool change.

INDEPENDENT MOTORS

Each machining unit has its own motor, in order to select the optimal power for each one.

MULTI-BLADE CUTTING

Equipment for vertical cutting of work-pieces with bottom horizontal spindle; it is possible to execute up to five cuts.

MILLIMETER LINES

They help the operator with manual positioning.
On models fitted with MOBILE PC, the software displays all the adjustments during the changes.

REMOVABLE INSERTS IN FRONT OF THE VERTICAL SPINDLES

For an excellent finish quality, depending on the tool diameter.

LOADING AND UNLOADING SYSTEM

“CS1” FEEDER

Hopper feeder provided with a pusher. A serrated roller, driven by an hydraulic device, feeds work-pieces continuously.

No idle time with the work-pieces return system, located at the end of the machine.

FEEDER WITH BENCH

It is composed by a set of powered chains for conveying work-pieces to the machine worktable. A pair of powered rollers feeds work-pieces into the machining area.

M Maestro Digital Systems

SMART SOFTWARE AND DIGITAL SERVICES TO ENHANCE PRODUCTIVITY OF WOODWORKING AND FURNITURE INDUSTRIES.

SCM accompanies woodworking companies throughout their whole process combining machines with matching software solutions and digital services, with a constant strive to enhance company productivity.

Maestro active

Factory

SOFTWARE

Simple, smart and open.

Maestro software are tailored on the machine technology as well as on the entire process. All Maestro software share a common mission:

easy to use, so that any operator can easily and confidently learn and use the software

smart, with algorithms and computing modules aiming at the best possible result

open in order to integrate existing software, and provide customer the coverage of all his process.

Console eye-M: smart, fair, interactive, effortless, revolutionary

SCM innovative touch screen console eye-M allows a comfortable easy navigation and use of the standardized user interface Maestro active.

Console eye-M is characterized by a full widescreen monitor (21.5") to ensure an effortless, convenient experience.

Maestro active 4-side

EASE OF USE

The new interface has been specifically designed and optimized for immediate use via touch screen. Graphics have been redesigned for simple and comfortable navigation, with tablet-like icons on touch screen controller.

"ZERO" ERRORS

Improved productivity thanks to guided procedures that reduce the possibility of error from the operator's side.

SOFTWARE

Factory

Maestro active 4-side

The MOBILE PC electronic control allows intuitive machine programming, combining the eye-M console and the Maestro active 4-side software.

FULL CONTROL OF PRODUCTION PERFORMANCES

The creation of customizable reports by operator, shift, program, forecast period (and much more) allows to monitor, optimize and improve the production performance.

ORGANIZE YOUR PRODUCTION

Maestro active allows to create different users with different roles and authorizations (e.g.: operator, maintainer, administrator, ...).

Any user can only execute the functions whose permissions have been assigned to him. It is also possible to define the work shifts on the machine and then detect activities, productivity and events that occurred in each shift.

TOTAL QUALITY OF THE FINISHED PRODUCT

With Maestro active the quality of the finished piece is no longer put at risk by worn tools. The new Maestro active Tool Life Determination system sends notification messages as the tool reaches its end of life and recommends its replacement at the most appropriate time.

TOOLS? NO PROBLEM!

Maestro active guides the operator during the tool change phase, taking into account the programs to be executed.

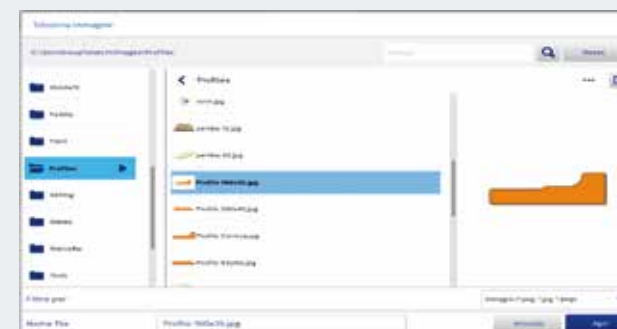

EASY TO USE

Main functions:

- customization of layout and options, specific to each machine composition
- tool library without number limits, with import of profile image
- work programs without number limits, with import of profile image
- MDI (Memory Data Input) function for guided manual adjustment of axes
- axes management with electronic adjustment, speed of towing, power on/off of motors, spindle rotation speed (if the inverter is included)
- tele-service and input/output display
- detailed reporting on the machine use
- guided operations by software during manual machine set-up

Customization of layout and options, specific to each machine composition.

Profile image management.

Tool image management.

Tele-service and input/output display.

Guided operations by software during manual machine set-up.

MDI (Memory Data Input) function for guided manual adjustment of axes.

Display of the tools wear status.

PRESET 50

Device for measuring min./max. tool diameter and tools axial position.
Thanks to “GT SOFT” software, it is possible to elaborate the data and directly update the tool charts of the machine with MOBILE PC.

CONTROL 10

Electronic control based on industrial PLC, with 7” colour touch screen monitor.

LABEL PRINTER

Complete work cycle with the possibility to manually apply the label on the outfeed work-piece (after the machining) to provide identification for subsequent operations.

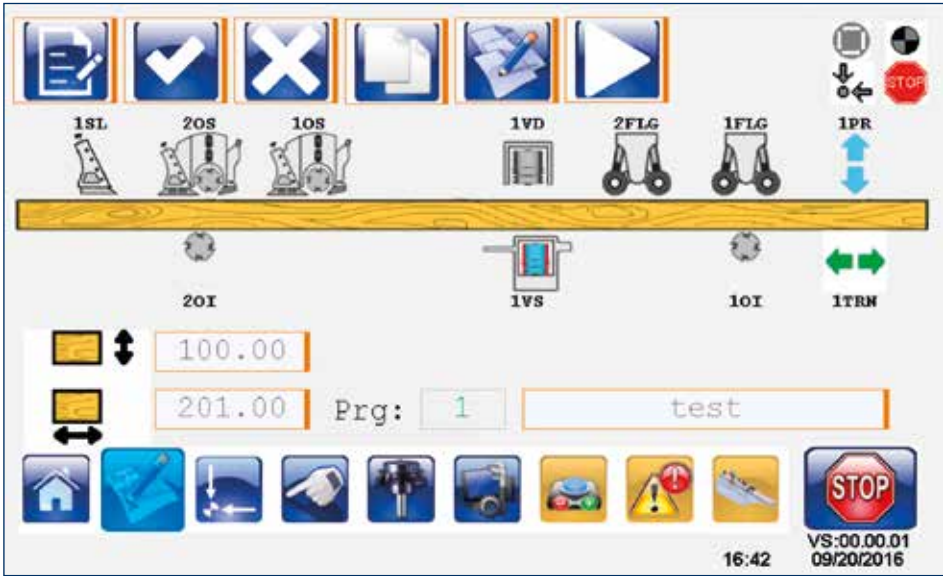

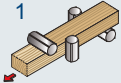

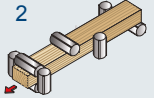

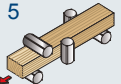

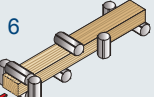

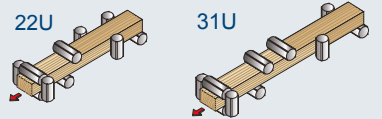

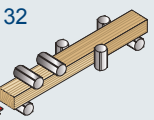

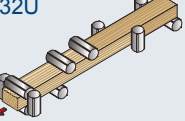

BARCODE READER

Quick and easy scanning of labels applied to the work-pieces by using the barcode reader.

Main functions:

- programming by menu with icons
- customization of layout and options, specific to each machine composition
- management of up to 8 electronic axes
- pre-arrangement for tele-service and input/output display
- backup for data saving and restoring
- storage of 999 programs
- storage of 999 tools

Machine composition	A (mm)	B (mm)	C (mm)	D (mm)	Weight (kg)

COMPANY WITH
QUALITY SYSTEM
CERTIFIED BY DNV
= ISO 9001 =

The technical data can vary according to the requested machine composition. In this catalogue, machines are shown with options. The company reserves the right to modify technical specifications without prior notice; the modifications do not influence the safety foreseen by the CE Norms.

Maximum noise levels measured according to the operating conditions established by ISO 7960 - 1995 / H.
Acoustic pressure in process 85 dB(A) (measured according to EN ISO 11202:1995, uncertainty K = 4 dB).
Acoustic power in process 101 dB(A) (measured according to EN ISO 3746: 1995, uncertainty K = 4 dB).

Even if there is a correlation between above mentioned "conventional" noise emission values and average levels of personal exposure over eight hours of operators, these last also depend on the real operating conditions, duration of exposure, acoustic conditions of the working environment and presence of further noise sources, this means the number of machines and other adjacent processes.

My Scm

THE STRONGEST WOOD TECHNOLOGIES ARE IN OUR DNA

SCM. A HERITAGE OF SKILLS IN A UNIQUE BRAND

Over 65 years of success gives SCM the centre stage in woodworking technology. This heritage results from bringing together the best know-how in machining and systems for wood-based manufacturing. SCM is present all over the world, brought to you by the widest distribution network in the industry.

65+ years history

3 main production sites in Italy

300.000 square metres of production space

20.000 machines manufactured per year

90% export

20 foreign branches

400 agents and dealers

500 support technicians

500 registered patents

In SCM's DNA also strength and solidity of a great Group. The SCM Group is a world leader, manufacturing industrial equipment and components for machining the widest range of materials.

SCM GROUP, A HIGHLY SKILLED TEAM EXPERT IN INDUSTRIAL MACHINES AND COMPONENTS

INDUSTRIAL MACHINERY

Stand-alone machines, integrated systems and services dedicated to processing a wide range of materials.

WOODWORKING TECHNOLOGIES

TECHNOLOGIES FOR PROCESSING COMPOSITE MATERIALS, ALUMINIUM, PLASTIC, GLASS, STONE, METAL

INDUSTRIAL COMPONENTS

Technological components for the Group's machines and systems, for those of third-parties and the machinery industry.

SPINDLES AND TECHNOLOGICAL COMPONENTS

ELECTRIC PANELS

METALWORK

CAST IRON
